

Korean Free Trade Agreement

CAWG Praises Completion of the Korean Free Trade Agreement

Joe Browde and the Pest Management Alliance worked together to assess use trends for FQPA-targeted pesticides in Madera, Napa and Sonoma counties. UC Davis researchers analyzed pesticide use reports for 1993-2000 and found that cumulative use intensity declined by 28 percent in Madera, 84 percent in Napa, and 46 percent in Sonoma.

Results for pesticide use by category showed greater reductions for fumigants and insecticides than for fungicides and herbicides.
